PENJELASAN CODE :

1. Penjelasan Umum Program

Program ini dibuat menggunakan Python, Pygame, dan PyOpenGL untuk menampilkan dan memanipulasi objek 3D (kubus) dan objek 2D (persegi) dalam satu jendela.

Tujuan utama program adalah menerapkan transformasi geometri, yaitu:

- Translasi
- Rotasi
- Skala
- Shearing
- Refleksi

Transformasi 3D diterapkan pada kubus, sedangkan transformasi 2D diterapkan pada persegi.

2. Library yang Digunakan

```
import pygame
from pygame.locals import *
from OpenGL.GL import *
from OpenGL.GLU import *
```

Penjelasan:

- pygame → mengelola window, event keyboard, dan loop program
- OpenGL.GL → fungsi rendering objek OpenGL
- OpenGL.GLU → fungsi bantu kamera (perspective & ortho)

3. Objek Kubus 3D

3.1 Data Titik (Vertices)

```
cube_vertices = [
    (-1,-1,-1),(1,-1,-1),(1,1,-1),(-1,1,-1),
    (-1,-1,1),(1,-1,1),(1,1,1),(-1,1,1)
]
```

- Terdiri dari 8 titik sudut kubus
- Menggunakan koordinat 3D (x, y, z)

- Ukuran kubus simetris terhadap titik pusat (0,0,0)

3.2 Garis Kubus (Edges)

```
cube_edges = [
    (0,1),(1,2),(2,3),(3,0),
    (4,5),(5,6),(6,7),(7,4),
    (0,4),(1,5),(2,6),(3,7)
]
```

- Menentukan hubungan antar titik
- Digambar menggunakan GL_LINES
- Membentuk rangka (wireframe) kubus

3.3 Variabel Transformasi Kubus

```
cube_pos = [-2,0,-6]
```

```
cube_rot_x = 0
```

```
cube_rot_y = 0
```

```
cube_scale = 1
```

- cube_pos → posisi kubus (translasi)
- cube_rot_x, cube_rot_y → sudut rotasi
- cube_scale → skala kubus

3.4 Fungsi draw_cube()

```
def draw_cube():
```

```
    glEnable(GL_BLEND)
```

```
    glBlendFunc(GL_SRC_ALPHA, GL_ONE_MINUS_SRC_ALPHA)
```

```
    glColor4f(0.6, 0.6, 0.6, 0.5)
```

```
    glBegin(GL_LINES)
```

```
    ...
```

```
    glEnd()
```

Penjelasan:

- `GL_BLEND` → mengaktifkan transparansi
- Warna abu-abu transparan
- Kubus digambar sebagai wireframe

4. Objek Persegi 2D

4.1 Titik Persegi

```
square_vertices = [
    (0,0,0),(2,0,0),(2,2,0),(0,2,0)
]
```

- Persegi berada pada bidang 2D (sumbu $Z = 0$)
- Digambar menggunakan `GL_QUADS`

4.2 Refleksi

```
def apply_reflection(vertices, axis=None):
```

- Refleksi terhadap:
 - Sumbu $X \rightarrow (x, -y)$
 - Sumbu $Y \rightarrow (-x, y)$
- Jika `axis=None`, tidak ada refleksi

4.3 Shearing

```
def apply_shearing(vertices, shear_x=0):
```

```
    new_x = x + shear_x * y
```

- Shearing pada sumbu X
- Bentuk persegi menjadi miring

4.4 Fungsi `draw_square()`

```
glColor3f(1.0, 0.8, 0.0)
```

- Persegi berwarna kuning
- Transformasi refleksi & shearing diterapkan sebelum Digambar

TAMPILAN AKHIR :

CARA MENJALANKAN :

Sistem Kontrol Keyboard

Kontrol Kubus 3D

Tombol Fungsi

← / → Translasi sumbu X

↑ / ↓ Translasi sumbu Y

W / S Translasi sumbu Z

A / D Rotasi sumbu Y

Q / E Rotasi sumbu X

Z Perbesar skala

X Perkecil skala

Kontrol Persegi 2D

Tombol Fungsi

I / K Translasi sumbu Y

J / L Translasi sumbu X

U / O Rotasi

N Perbesar skala

M Perkecil skala

Transformasi Khusus Persegi

Tombol Fungsi

1 Shearing X aktif

2 Shearing X mati

3 Refleksi sumbu X

4 Refleksi sumbu Y

5 Reset refleksi

Dapat di jalankan menggunakan control keyboard 3D dan 2D yang tertera di atas
